Mine closure planning, delivery and post-closure management

Mine closures are an inevitable aspect of the mining industry.

Effective closure planning requires the input of a multi-disciplinary team. Team members bring their own unique technical and non-technical skills to the table. It requires an adaptive and open mindset, a collaborative approach and a risk-focussed view.

We've been there and done it - one of few organisations to lead the planning, delivery, completion and relinquishment of major Australian mining leases. We specialise in the development and implementation of care and maintenance plans, including post-rehabilitation/ pre-relinquishment planning and delivery.

Proactive and industry-seasoned planning provides opportunities for operational and stakeholder alignment that fully integrates closure planning at the earliest possible stage with a measurable reduction in closure cost.

Talk to us about how our experience base can deliver real benefits to your business.

We can assist you with:

- PEPR / Mine Operating / Management Plan development
- Closure/Rehabilitation Plan development and implementation
- Closure cost modelling
- Stakeholder management
- Regulatory engagement
- Independent review
- Infrastructure demolition
- Monitoring programs
- Post-closure management
- Risk management

Our client sectors include:

- Operational mines and quarries
- Care and maintenance mines
- Power generation facilities
- Construction and demolition
- Industrial processing
- Logistics infrastructure and operations
- Consultants
- Regulatory bodies
- Governments
- Utilities
